

COACHELLA 2026 LIVE MUSIC FESTIVAL

Name : PODDUTURI KARTHEEK REDDY

Student ID : 2520090015

CLUSTER : III

Section : 11

Under the Guidance of

Mrs. Surekha

Assistant professor

Department of CS&IT

ABSTRACT

The Coachella 2026 Live Music Festival Ticket Booking website is an HTML-based web project designed to provide users with a simple, interactive, and visually engaging platform for booking festival tickets online. The website presents essential information about the Coachella 2026 event, including artist lineups, event schedules, ticket categories, pricing details, and venue highlights. Using core HTML elements such as forms, tables, images, and hyperlinks, the project demonstrates how a static website can effectively simulate a real-world ticket booking system while ensuring user-friendly navigation and accessibility.

This project aims to enhance understanding of front-end web development concepts by implementing a structured layout and intuitive design focused on user experience. The ticket booking section allows users to select ticket types, enter personal details, and submit booking requests through HTML forms. Overall, the project showcases how HTML can be used to design a functional festival ticket booking interface, making it suitable for educational purposes and as a foundation for future enhancements using CSS and JavaScript.

Outstanding In The Field

Outstanding in the Field, Jim Denevan's roving, off-grid culinary experience which has traveled to 25 countries, sets its signature long table in the tranquil hideaway of our VIP Rose Garden for the twelfth year in celebration of the farms and local produce of the Coachella Valley. Guests are welcomed with a signature cocktail, then gather for a four-course, wine-paired communal dinner prepared by acclaimed chefs from California and beyond.

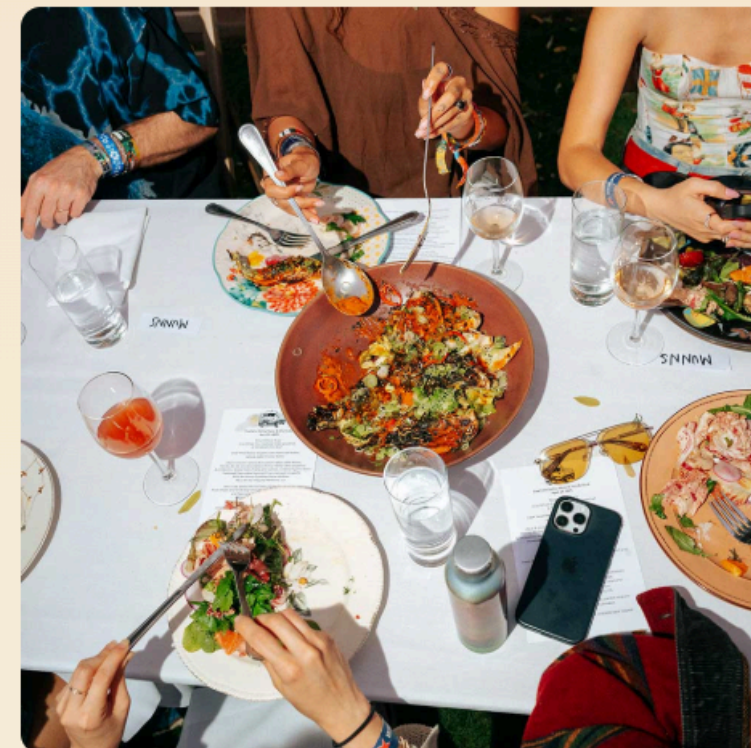

Festival pass required.

Seating begins promptly at 6pm.

Dinner tickets include a welcome cocktail, four-course family style meal with wine and exclusive access to the VIP Rose Garden on the day of your dinner.

PROJECT MODULES

Lineup Module

Artist cards display
Filter by day (Fri/Sat/Sun)
Artist detail popup

Schedule Module

Day-wise performance timetable
Interactive tabs

Tickets Module

Ticket categories (General / VIP)
Quantity selection
Total price calculator
Basic form validation

Food & Merchandise Module

Food Section

List of food stalls/vendors
Categories (Vegan, Fast Food, Drinks, etc.)
Stall location info

Merchandise Section

Official festival merch display (T-shirts, Hoodies, Caps)
Product cards with price
Merch location info

OBJECTIVES

- To design a responsive and user-friendly festival website using HTML, CSS, and JavaScript
- To provide complete information about lineup, schedule, tickets, food, and merchandise
- To implement interactive features like countdown timer, filtering, and price calculation
- To enhance user experience with animations and responsive design
- To apply front-end development concepts in a real-world project

CO's ATTAINMENTS FWD

CO1 – Internet Fundamentals, HTML & Basic

CSS Used :

HTML structure (header, nav, section, footer)
Forms, inputs, headings, links
CSS selectors, colors, spacing, typography
Meta viewport tag

CO4 – JavaScript Interactivity &

DOM Used :

DOM manipulation (getElementById, innerHTML)
Event handling (onclick)
Timers (setInterval)
Animation (requestAnimationFrame)

CO2 – Forms, Semantic Tags & Advanced CSS

Layout Used :

Form handling (Login & Ticket Booking)
CSS Grid layout (grid-template-columns)
Transitions & hover effects
Basic animations (fireworks canvas)
Responsive layout design

CO3 – JavaScript Programming

Essentials Used :

Variables, arrays, objects
Conditions & loops
Functions
Array methods (push, pop, shift, filter, sort)

CO5 – Advanced Web Development & Deployment

Partially Used :

JavaScript form validation
Dynamic user interaction

CO's ATTAINMENTS DSA

CO1 – Searching & Sorting Algorithms

Used :

Binary Search (searchUser() function)
Sorting using localeCompare() before
binary search

CO3 – Stacks & Queues

Used :

Stack (LIFO) → stack[] for Undo
(pop())
Queue (FIFO) → queue[] for
Processing (shift())

CO2 – Abstract Data Types (Arrays)

Used :

Arrays for:
bookings[]
cart[]
Artist lists
Operations:
Insert (push)
Delete (filter)
Traverse (forEach)
Search

CO4 – Hash-Based Structures

Used :

artistCount{} → works like a Hash Map
Fast lookup and update of booking
counts per artist

CO5 – Practical Applications of Linear DS

Used :

Real-world ticket booking simulation
Cart management
Admin processing system

        }  
    }
```

CONCLUSION

The Coachella 2026 Ultimate Live Music Festival website is a complete front-end web application developed using HTML, CSS, and JavaScript. It successfully demonstrates structured webpage design, responsive layouts, interactive forms, dynamic content updates, and animation effects.

The project integrates:

- Well-organized HTML semantic structure

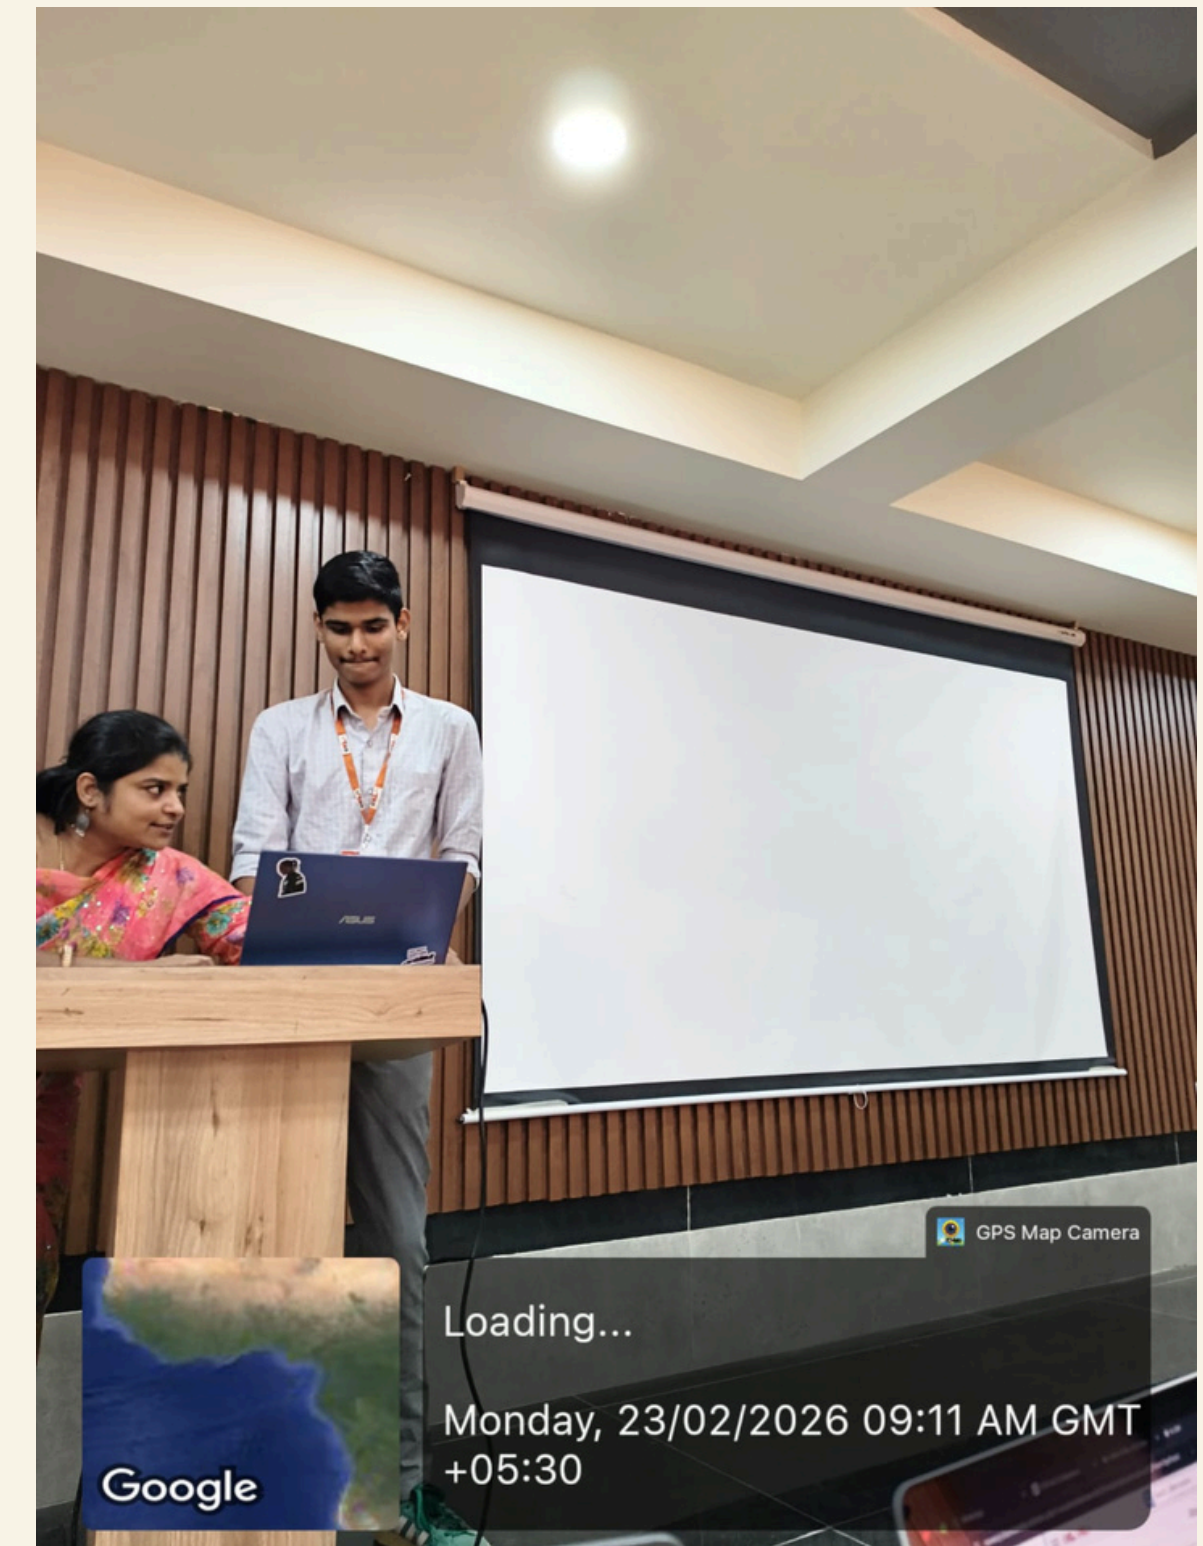

- Modern CSS styling with Grid, Flexbox, transitions, and visual effects

- Interactive JavaScript features such as DOM manipulation, event handling, form validation, countdown timer, and animations

- Basic data structure concepts like arrays, stack, queue, and searching logic for real-world simulation

Overall, the website provides a user-friendly and interactive festival booking experience while showcasing strong understanding of front-end development concepts. It effectively combines design, functionality, and interactivity into a practical web application.
